

Bastion Host

```
1 clear
2 sudo hostnamectl set-hostname bastion-host
3 exec bash
4 hostname
5 ssh ubuntu@10.0.175.109
6 touch backend.pem
7 ls
8 vim backend.pem
09 cat backend.pem
10 chmod 400 backend.pem
11 ssh -i backend.pem ubuntu@10.0.175.109
```

Backend Server 01 & Backend Server 02

```
1 curl -sL https://deb.nodesource.com/setup_14.x | sudo bash -
2 sudo apt install nodejs npm -y
3 node --version
4 git clone https://github.com/devopstraining99/DS-Lab
5 cd DS-Lab
6 cd backend-node-mysql
7 cat package.json
8 sudo npm install
9 cd node_modules
10 cd app
11 cd config
12 cat db.config.js
13 sudo vim db.config.js
14 cd ..
15 ls
16 node server.js
```

Frontend Server 01 & Frontend Server 02

```
1 curl -sL https://deb.nodesource.com/setup_14.x | sudo bash -
2 sudo apt install nodejs npm -y
3 node --version
4 git clone https://github.com/devopstraining99/DS-Lab
5 cd DS-Lab
6 cd frontend-angular
7 cat package.json
8 sudo npm install
9 sudo npm install -g @angular/cli@10.2.4
10 ng --version
11 sudo npm install --save-dev @angular-devkit/build-angular
12 cd src/app/services
13 sudo vim tutorial.service.ts
14 sudo ng build --prod
15 cd dist
16 cd Angular10Crud
17 sudo apt install nginx -y
18 sudo mv * /var/www/html
19 cd /etc/nginx/sites-enabled
20 sudo vim default
21 sudo systemctl restart nginx
```
